

*** 10% Seizure Plan ***

How to reset an “illuminati” (ie. western democratic) economy. This SHOULD reset the economy to a financially lucrative condition similar to the 1990's or 2000's. Verify first the reasoning, then implement

The plan in a nutshell is to perform a *Russian-style oligarch seizure*, but this plan is fine tuned as we know the dynamics of it. WE KNOW HOW IT WORKS!!!

What we do is we (the US Federal Government) seize **10%** of the stagnant capital of (1) our richest AND (2) of our outstanding Government securities (ie. federal debt). It is conventional wisdom right now that *Officers, Directors and 10% Shareholders* hold vast amounts of *stagnant capital*.

What is Stagnant Capital? It is capital that is **UNUSED** and therefore a large portion of what is constricting our MONEY supply, what is fueling the growing perception that there is an issue with our money supply (that there is not enough of it to circulate in the economy) that the divide is growing between the “haves and the have nots.” Apparently, this is not just a perception but perhaps a real phenomenon.

Seizure Plan – What we do it we seize 10% of the *total shares outstanding* from all publicly traded companies, but it results in a **30% seizure** from the top tiers (where the stagnant capital resides) while bypassing the mutual funds, and other citizen's individual savings. There is a reason for this!

Also to augment we seize 10% of all government issued securities that are issued (the intent is foreign but domestic).

This should result in the liberation of about **\$3 Trillion USD** that we then dump directly into the US Federal Government **GENERAL FUND**. We hope it will be used for revitalizing social programs and the like, but its main fiscal intent is to form a *currency disbursement*. We figure that the power of money is at what rate it changes hands, that a constriction of it forms a strange situation that we are seeing here where the economy is blasting, but the major portion of the economy is underwater, stagnant and poverty ridden.

Reasoning

If you take **Market Capitalization** (“MarketCap”) as the measure of dollars worth of capital in *Total Shares Outstanding* multiplied by *average share price over the last fiscal year* in the NYSE and the NASDAC, you will find that the distribution of shares is somewhat how you see on the Internet: that our richest have the most money.

But it isn't money, at least to them. They tend to spend it personally at a low rate (to reduce tax burden) and justify the amount of retained shares more for company control than as a measure of wealth. The unfortunate effect is similar to Japanese over-saving of the 1960-80's, that it constricts the physical money supply, which is critical to the over-all economy operating efficiently.

I suppose it is like an old man with cardiovascular difficulties asking the doctor why his limbs are oxygen starved? WHERE IS THE CONSTRICTION!?!?

So seizing only 10% should be easily achievable by the US Federal Government. **IMPORTANT**: it is CRITICAL that it be seized; our research indicates that there might be parts of formal double-entry accounting that are magic and REQUIRE the ownership linkage between the seized capital and their original owners **BE SEVERED** for this to work. THIS REQUIRES SEIZURE!!!

A 10% (30% seizure on top missing the mutual funds, etc) to business, and a 10% seizure to Fed Government issued securities, will liberate 3 trillion USD (capital that will need to be transferred to dollar bills) and 250 Billion USD on the Government debt side, for a total of 3.250 Trillion. Injected into a 20 Trillion dollar economy, this would result in the **IMMEDIATE REJUVINATION** of it.

This released stagnant capital is then injected into circulation as physical money (bills, notes) through government services to the common citizen. What increases the money supply though is the continually changing hands of the injected money.
